5.2 Requêtes

1

<u>SELECT</u> numCommande FROM lignecommande GROUP BY numCommande HAVING <u>count</u>(DISTINCT fournisseur)>5

AUcune commande n'est affichée

2

<u>SELECT</u> numCommande FROM lignecommande GROUP BY numCommande HAVING <u>count</u>(DISTINCT fournisseur)=1

Toutes les commandes s'ffichent

3

<u>SELECT max</u>(t.somme), numCommande FROM (<u>SELECT sum</u>(quantite*prixUnit) as somme, numCommande FROM lignecommande, article WHERE lignecommande.numA = article.numA GROUP BY lignecommande.numCommande) as t GROUP BY numCommande ORDER BY 1 DESC

max(t.somme)	numCommande
23434	1
10800	8
1540	4
1424	11
1156	9
826	2
399	12
338	10
220	5
188	6
76	7
68	3
24	13

TP3

1.

UPDATE commande

SET Architecte = 'Durant' WHERE Chantier='Beaugeron';

UPDATE commande

SET Architecte = 'Jolibois' WHERE Chantier='Gauguin';

UPDATE commande

SET Architecte = 'MaisonNeuf' WHERE Chantier='Lampion';

2. Requêtes

1

<u>SELECT max(t.r)</u>, architecte FROM (<u>SELECT count(chantier)</u> as r, architecte FROM commande GROUP BY architecte) as t GROUP BY Architecte

2

SELECT max(Montant), Chantier FROM commande

ΟU

SELECT Montant, Chantier FROM commande WHERE Montant >= ALL (SELECT Montant FROM commande)

	Montant	Chantier
r	38200	Beaugeron

3

<u>SELECT max(t.r)</u>, architecte FROM (<u>SELECT</u> architecte, <u>count(lignecommande.article)</u> as r FROM lignecommande, commande WHERE lignecommande.numCommande=commande.numCommande GROUP BY lignecommande.numCommande) as t GROUP BY architecte

4

<u>SELECT max(t.r)</u>, chantier FROM (<u>SELECT</u> chantier, <u>count(lignecommande.fournisseur</u>) as r FROM lignecommande, commande WHERE lignecommande.numCommande=commande.numCommande GROUP BY lignecommande.fournisseur) as t GROUP BY chantier

5

<u>SELECT</u> a.* FROM article a WHERE (<u>SELECT sum</u>(l.quantite) FROM lignecommande as I WHERE l.numA = a.numA) >= ALL (<u>SELECT sum</u>(l1.quantite) FROM lignecommande l1 GROUP BY l1.numCommande)

numA	Référence	prixUnit
3	M818	45

3 - Calcul automatique du montant d'une commande

remettre montant total pour les commandes

UPDATE Commande

SET montant = (SELECT sum(article.prixUnit * lignecommande.quantite) FROM lignecommande, article WHERE lignecommande.article = article.Référence AND lignecommande.numCommande = commande.numCommande)

TRIGGER:

CREATE TRIGGER trig_comm AFTER INSERT ON lignecommande FOR EACH ROW

BEGIN

UPDATE commande

SET NEW.commande.montant = OLD.commande.montant+(SELECT sum(NEW.article.prixUnit*NEW.lignecommande.quantite) FROM lignecommande, article WHERE NEW.lignecommande.numCommande = commande.numCommande AND NEW.article.Référence = NEW.lignecommande.article);

END
